

Stratification and weighting via the propensity score in estimation of causal treatment effects: a comparative study

I would like to report an erratum to the paper titled ‘Stratification and weighting via the propensity score in estimation of causal treatment effects: a comparative study’ by Lunceford and Davidian, *Statistics in Medicine*. In consulting my original notes and comparing with the paper, there is a typographical error in the expression that follows immediately after equation (21) on page 2946. An inverse sign (–1) is shown that should be removed. The expression

$$\hat{\mathbf{E}}_{\beta\beta}^{-1} = n^{-1} \sum_{i=1}^n \hat{e}_i (1 - \hat{e}_i) \mathbf{W}_i \mathbf{W}_i^T$$

should be

$$\hat{\mathbf{E}}_{\beta\beta} = n^{-1} \sum_{i=1}^n \hat{e}_i (1 - \hat{e}_i) \mathbf{W}_i \mathbf{W}_i^T.$$

All computations in the paper were correct and unaffected by this typographical error.
